                disorders, in bone cartilage, tendon, ligament and/or nerve tissue growth or regeneration, in wound healing, in tissue repair and replacement, in healing of burns, incisions and ulcers, and in treating cancer. This sequence corresponds to a polynucleotide sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and polynucleotides (II). (I) and (II) are merit for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses, and is involved in increasing haematopoiesis, stem cell survival, bone growth and remodeling. (II) and modulators of (II) are useful for prophylaxis or treatment of one or more cancers. (II) is also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel isolated human secreted polypeptides (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             P,

Treating transpants as for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides.

(1) induces the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of central and correct and brain tissue and is useful for the treatment of central and cativity. Parkinson's disease, Huntington's disease, and amyotrophic lateral corrections and addition, (1) is involved in chemotactic or chemokinetic activity, regulation of hematopolesis and is useful for treating myeloid or lymphoid cell disorders, platelet disorders such as thrombocytopenia cor lymphoid cell disorders, platelet disorders such as thrombocytopenia cor lymphoid cell disorders, platelet disorders such as thrombocytopenia correction and in tissue repair, healing of burns, incisions, ulcers, for treating osteoporosis, osteoarthritis, bone degenerative disorders, correction or regeneration and treatment of lung or liver fibrosis, corpertion or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and conditions, such as asthma or other respiratory problems. In addition, (1) affects biorhythms or circadian cycles of rhythms, carabolism, carabolism, suchage or climination or disease the surface of in addition, (1) affects biorhythms or circadian cycles of rhythms, carabolism, carabolism, such composition to raise an analgesic effects or other pain reducing effects, immunoglobulin like cactivity and can act as an antigen in a vaccine composition to raise an order response.

The proteins and coding sequences are useful for preventing or treating disorders or syndromes e.g. atherosclerosis, hypertension, obesity or cancer. NOV25 is a MEGF7-like protein and its coding sequence maps to chromosome 11.

This invention relates to a novel human MEGF7 polypeptide (a polypeptide having multiple epidermal growth factor-like domains, including an unidentified low density liboprotein (LDL) receptor-like protein). The sequences of the invention may be useful for gene therapy or protein therapy or for the modulation of MEGF7 expression and activity. The invention may be useful for the development of methods to diagnose or treat diseases associated with inappropriate MEGF7 activity or levels. The polypeptides and polynucleotides are also useful for configuring screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polynucleotides are also useful as diagnostic reagents, through detecting muttations in the sasociated gene. The polynucleotide sequence is useful for chromosome localisation studies and tissue expression studies. The present sequence is the gene which encodes the human MEGF7 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated human MEGF7 polypeptide, a polypeptide having multiple epidermal growth factor-like domains, useful in diagnostic assays for detecting diseases associated with inappropriate MEGF7 activity or

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; secreted protein; arthritis; Crohn's disease; sepsis; shock; ischaemia-reperfusion injury; haematopoiesis; cancer; neuropathy; transgenic animal; Alzheimer's disease; Parkinson's disease; burn; amyotrophic lateral sclerosis; platelet disorder; thrombocytoponia; ulcer; osteoporosis; bone degenerative disorder; thrombocytoponia; gut protection; lung; liver fibrosis; immune deficiency; infection; severe combined immunodeficiency; SCID; autoimmune disorder; allergy; multiple sclerosis; rheumatoid arthritis; diabetes mellitus; asthma; fertility; analgesic; pain; antigen; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel polynuclectide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence

The Invention Featers to novel 1801afted human secreted polypeptides (I) and polymucleotides (II). (I) and (II) are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses, and is involved in increasing haematopoiesis, stem cell survival, bone growth created in increasing haematopoiesis, stem cell survival, bone growth compared in increasing haematopoiesis, stem cell survival, bone growth creating transgenic animals useful for studying the in vivo activities of prophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying modulators of the polypeptides of the polypeptide as well as for studying modulators of the polypeptides of the polypeptides. (I) induces the proliferation of neural cells and resoneration of neural comparation of central and peripheral hervous system diseases and neuropathies, such as Alzheimer's, peripheral hervous system diseases and neuropathies, such as Alzheimer's, clerkosis. In addition, (I) is involved in chemotactic or chemokinetic activity, regulation of haematopoiesis and is useful for treating myeloid or lymphoid cell disorders platelet disorders such as thrombocytopenia and for regeneration of bone, cartilise, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns increasing myeloid or periodontal disease. Furthermore, (I) is also useful for gut protection by regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and classation or other respiratory problems. Theumatoid arthritis, diabetes mellitus, myasthenia gravis, and addition, (I) affects biomyania, and cat as an antigen in a voccine composition to raise an immune response. Assets or o
                                                                                                                                       The invention relates to novel isolated human secreted polypeptides (I)

```
This invention relates to a combination comprision general curvae interact are differentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed communication of the invention may have antidiabetic; conna in a sample. The cDNAs of the invention may have antidiabetic; gynaecological; vascropic and carebroprotective activities and may be used in gene therapy. The CDNAs of the invention may be used in a high-throughput methods for detecting differential expression of one or more consoling a molecule or compound that specifically binds a CDNA of the invention. A protein encoded by the CDNA may be used to screen several contentity a molecule or compounds to identify a ligand that specifically binds to the protein, or to produce or purify a natioal or compounds to identify a ligand that specifically binds to the protein or to produce or purify a natioal or core second to a vascular disease, e.g. atherosclerosis, cancer, coronary artery of a vascular disease, e.g. atherosclerosis, cancer, coronary artery of injury, restenosis, or stroke The CDNAs can also be used for large-scale genetic or gene expression analysis of several new nucleic acid collagnosing pre-pathologic disorders, and chronic or acute diseases of disances to the protein encoded by the CDNAs are useful for disanceined with abnormalities in the expression, amount or distribution of the protein. The present sequence represents a cDNA of the invention that is differentially expressed in activated vascular tissue. Note: The content of the protein of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       invention relates to a combination comprising several cDNAs that are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the nucleotide sequence of human lipid-associated molecule LIPAM-6 (Incyte polynucleotide 7510885CB1), which encodes a protein that shows sequence homology to chicken alpha-2-macroglobulin receptor. This is one of 19 LIPAM polynucleotides of the invention. The invention relates to novel LIPAMs and the nucleic acids encoding them, and prevention of disorders associated with abnormal expression treatment and prevention of disorders associated with abnormal expression's clisease, Alabaimer's disease, muscular disorders (e.g. myotonic disease, Alabaimer's disease), muscular disorders (e.g. myotonic disease), cancers (e.g. endocrine disorders (e.g. disbetes, Grave's cimmunological disorders (e.g. coleroderma, systemic lupus erythematosus, allergies), gastrointestinal disorders (e.g. Crohn's disease), renal disorders (e.g. coodpasture's syndrome), infections (e.g. viral, bacterial, fungal, parasitic, protozoal, helminthic), cardiovascular disorders (e.g. catherosclerosis), or hepatic diseases (e.g. cirhosis). The invention also relates to the assessment of the effects of exogenous compounds on the expression of nucleic acids and LIPAMs. The invention also relates to the assessment of the effects of exogenous provides expression vectors, host cells, antibodies, agonists and antagonists transgenic organisms, and arrays and microarrays of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New LIPAM polypeptides, useful for diagnosing, preventing, and treating disorders associated with abnormal expression or activity of LIPAM, e.g. neuromuscular, immunological, cardiovascular disorders, cancer and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Warren
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chang H;

The present invention relates to LP (LP318a, LP318b, LP288, LP289, LP313, LP319a, LP319b, LP311, LP317, LP283, LP344, LP345 or LP346) proteins and polymucleotides encoding such proteins. Sequences of the invention are used to diagnose, treat or prevent cell proliferative disorders (e.g. actinic keratinosis, arteriosclerosis, psoriasis, leukaemia, lymphoma, melanoma, brain cancer or breast cancer), autoimmune or inflammatory disorders (e.g. ALDS (acquired immune deficiency syndrome), Addison's disease, allergies, ankylosing spondylitis, amyloidosis, anaemia, asthma, Crohn's disease, Goodpasture's syndrome, gout, Hashimoto's thyroiditis or Grave's disease), cardiovascular disorders (e.g. congestive heart failure, ischaemic heart disease, aniana pectoris, myocardial infarction, atherosclerosis or hypertension), neurological disorders (e.g. stroke,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New mammalian LP polynucleotides and proteins, useful in gene therapy, e.g. for treating or preventing cancers, autoimmune (e.g. AIDS), cardiovascular (e.g. myocardial infarction) or neurological (e.g. stroke)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Seno ET;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Keleher GP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated polypeptides associated with ovarian carcinomas, and the nucleic acids that encode them, useful for the prevention diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of coding sequences and proteins, the over-expression of which is associated with ovarian carcinoma/cancer. These can be used in the diagnosis, treatment and prevention of ovarian cancer, optionally by gene therapy or in the form of a vaccine. The present sequence is an example of one of these sequences
Parkinson's disease or Alzheimer's disease) or developmental disorders (e.g. Down's syndrome or cerebral palsy). They are also used in gene therapy. The present sequence is human LP288 DNA
                                                                                                                                       Gaps

The sequence contained an oligo-dT track that was present in the oligouclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Not1 site and the oligo-dT track served to verify it as a clone from the retina tissue cDNA Library Preparation: M.B. Soarse Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAs whose availability will be considered under appropriate and limited collaborative arrangements The tissue for this library was contributed by Dr. Xin-Yuan Fu, Yale University School of Medicine The following repetitive elements were found in this cDNA sequence: 1-21, >AT rich#Low complexity 169-428, >LX9#LINE/LI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BE950396 435 bp mRNA linear EST 29-APR-2002 UI-M-CE0-ayw-a-10-0-UI.81 NIH BWAP_Ret3 Mus musculus cDNA clone UI-M-CE0-ayw-a-10-0-UI 3', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus. Introduct at the rollinowing Ukti.

Introp. (Standard Prococol) All procedures have been described in detail elsewhere (Soares et al., 1994; Boraldo et al., 1995; Jainaget al., 2001). Total cellular RNA from each sample was isolated by using cellular RNA from each sample was isolated by using cellular RNA from each sample was isolated by using cellular RNA from each sample was isolated by using cellular RNA from each sample was isolated by using cellular RNA from each sample was isolated by using cellular RNA from each sample was isolated by using cellular RNA from each sample was isolated by using constructed by the manufacturer's instructions. The libraries were constructed by the manufacturer's instructions provided with the SuperStript Planand System (Invitrogen, car. no.) 1834 e0.11) Briefly, incg of poly(A)+ RNA was annealed at Gardegres with luncg of both-teg-dried oligomucleotide (Gardegres with luncg of both-teg-dried oligomucleotide (Gardegres with System en all 2001). The 'tag' represents a tissue/space with luncg of the instructions provided with the System Conference (Intrincedor). The 'tag' represents in the presence of DNA ligame and RNABS H. Acts second strand synthesis, the double-strand synthesis pas performed with Ty DNA by Lectinologies). After ligation of the inserts, the plasmids were bligged to Sall adapters (Invitrogen-Life technologies). After ligation of the inserts the plasmids were electroporated into DHIOB beacerial. Library was not sufficient for Inbrary broduction with the was recovered from cocytes and embryos was quite limiting and standard protocol. Therefore, PCR-based protocol was mount of extracted may was residence within the SMART aligation of the inserts the plasmids was not sufficient for Inbrary broduction with several summing the Mixed protocol. Therefore, PCR-based protocol was solutional servance in which the sample of the profour Squard conditionated by using Chrona Spin-1000 columns (Contract Manual) the SMART and disonuclent servance complementary to the RNART and library were pooled to produce a single mixed library mogalibrary) for more extensive sequencing.
Bioinformatics work was performed by GK Springer's bioinformatics group (Spollen WG, Topinka CM, Khambati AA) corpora lutea (days 3, 5, 8, 14, 16, 18 and 35); ovarian follicles (days 0, non-recruited, recruited, early selected and preovulatory); oviduct (days 0, 3 and 5); endometrium (days 5, 8, 14, 16, 18 and 35); and placenta/embryo from day 35 conceptuses. Expanded descriptions of how the tissues were collected can be found at the following URL: Missouri-Columbia DNA Core Facility. After production the libraries, equal numbers of recombinants from each

/note="Vector: PWD42nv; Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polymuclectide kinase. Adaptor oligonuclectides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis vector DNA was prepared from a derivative
of pWD42 (gil 4732114 gb) AR129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus. The present survey of the Paramecium tetraurelia macronuclear genome consists of end sequences of a library of random 4-12 kb fragments obtained by Sau3A partial dispestion of macronuclear DNA cloned in the BamHI site of pBSIIKS-. See [4].

Genes are predicted from matches to other sequences. For more information about this sequence or the Paramecium Project, see http://paramecium.cgm.cnrs-gif.fr.

                                                                                                                                                                                                                                                                                                                                                                                   Sequence 93, Application US/09825294

Patent No. 6710170

GENERAL INPORMATION:
APPLICANT: X-1 Jangchun
APPLICANT: Algate, Paul A.
TITLE OF INVENTION: THERAPY AND DIAGNOSIS OF OVARIAN CANCER
TITLE OF INVENTION: THERAPY AND DIAGNOSIS OF OVARIAN CANCER
TITLE OF INVENTION: THERAPY AND DIAGNOSIS OF OVARIAN CANCER
CURRENT FILING DATE: 2001-04-03
NUMBER OF SEQ ID NOS: 215
SOFTWARE: FBSEGE for Windows Version 3.0
LENGTH: 396
